Overview

Fit unique shapes with LLS series LED light sheets. Flexible enough to wrap corners, they can be trimmed to fit custom installations. Cut along the horizontal, vertical, or diagonal black lines to customize the flexible sheet. Even in signs or backlighting with low clearance, the high density of LED chips ensures even light distribution. Peel off the 3M™ adhesive backing, or fasten it with screws at the indicated spots to mount this light sheet.

Note: Using only the pre-marked lines when cutting the sheet is essential to maintaining electrical contact.

Features

- Flexible, cuttable LED sheet adapts to complex shapes
- Single CCT and tunable white (2700K-6500K) available
- 3M™ adhesive backing peels off for easy application
- 24 VDC

Product Details

- Enclosed rated clearance - 36 mm
- IP20 rated for dry conditions
- 50,000-hour L70 LED lifespan

Certifications

- UL Listed - UL 2108 (IFDR)

Warranty

- 5-year warranty

Dimensional Drawings

LLS-AxK80-C1A-30A01-24V⁴

- 32.8ft (10m) single column/row max run²
- 3x full sheet max run²

LLS-H80-C2A-60B01-24V

- 16.4ft (5m) single column/row max run²
- 1.5x full sheet max run²

Note: The strip height for all strip sheets shown is 0.06in. (1.5mm).

² Max run listed is using one power supply connected at one end of the run.

⁴ (XH) models are the same size but will have connectors on the sheet rather than an attached pigtail. Includes 1x pigtail and 1x interconnect cables.

Cutting Segments

Strip sheets can be cut into many custom shapes. Cut using only the pre-marked cut lines on the sheet. Using the cut lines is essential to maintaining the integrity of electrical contacts. The images below represent the minimal linear routing configurations. The green box represents strip routing layouts that work by preserving the electrical connection, and the one in red represents a routing type that will not function correctly due to interruptions of the electrical connection.

Strip Flexibility

Hard bends can be made up to 90° in either direction.

Soft bends less than 1.5in. may damage circuit traces and void warranty.

Bending strips sheets or sections at sharp angles will damage circuit traces and void warranty.

Bending strip sheets or sections on horizontal plane will damage circuit traces and void warranty.

Application

Below are examples of the types of shapes and patterns that can be made and linked as needed to fit nearly any application. The only limiting factor is max run (see spec table), which can be easily extended by connecting additional power supplies⁵.

Additional power supplies can connect to any individual square LED segment anywhere in the run for maximum flexibility.

⁵When multiple power supplies are connected to one run, each power connection requires a separate controller. This type of application requires the controllers to be able to synchronize settings.
